- Weight: 11Kg

Workstation MK V

The Rent IT MK V Workstation incorporates a nVidia GTX1080 graphics card and has been designed for virtual reality creation and operation from the ground up, also suitable for high end applications.

This VR oriented hire workstation provides increased performance in a smaller cooler tower case, ideal for creating virtual reality environments, video, animation & media. Should 32GB RAM be insufficient this workstation can be easily upgraded to 64GB and even 128GB. The 1000 watt PSU provides enough power to upgrade to 2 x GTX 1080 video cards and internal storage bays providing ample room to add up to 4 additional hard drives. Our MK V Workstation is the fastest PC we have built yet, also the quietest and coolest running.
