

CPV (Common Procurement Vocabulary) Codes

Often used in the public sector, but sometimes also by private businesses, the CPV codes or Common Procurement Vocabulary codes allow purchasers to quickly identify and code the products they require. Developed by the European Union these are widely used in Public sector procurement

As well as being used to identify products in tender documents etc CPV codes also allow public bodies to gather data and provide statistical information based on the CPV codes used in various tenders and purchases.

In order to assist our public sector customers we have added CPV codes to many of our product pages. However the following lists all the Common Procurement Codes presently applicable to our product ranges.

The initial 2003 CPV codes were updated in 2007 and where applicable we have provided both numbers.
